

Two of the three transforms reduce the contrast they were meant to improve, once the background spread they also raise is accounted for

No preprocessing

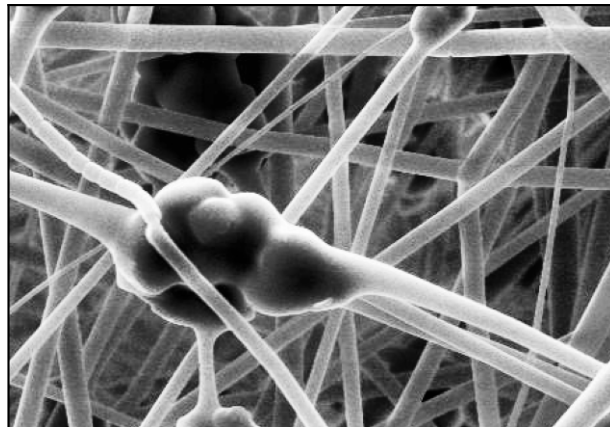

separation 23.6 grey levels
background s.d. 35.2 $\Delta/\sigma = 0.67$

Median filter, 3×3

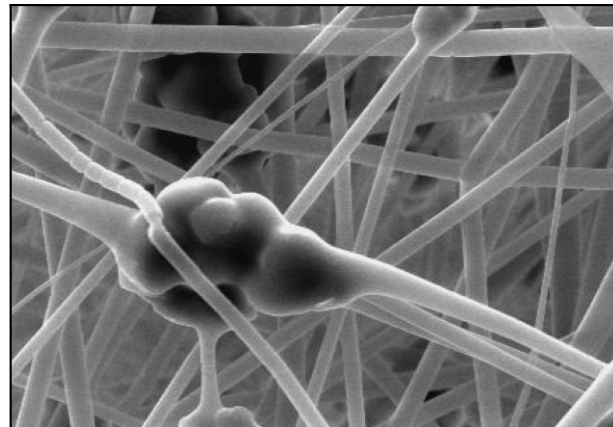

separation 23.6 grey levels
background s.d. 34.0 $\Delta/\sigma = 0.69$

CLAHE

separation 20.1 grey levels
background s.d. 60.9 $\Delta/\sigma = 0.33$

Background subtraction

separation 25.6 grey levels
background s.d. 36.7 $\Delta/\sigma = 0.70$
